Article 5: General Development Standards

Section 5.1. Parking and Loading

5.1.1. PURPOSE AND INTENT

The purpose of this section is to ensure provision of off-street parking and loading facilities in proportion to the generalized parking, loading, and transportation demand of the different uses allowed by this Ordinance. The standards in this section are intended to provide for adequate off-street parking while allowing the flexibility needed to accommodate alternative solutions and to avoid excessive paved surface areas.

5.1.2. APPLICABILITY

A. Permanent off-street parking, as required in this section, shall be required in the following situations:
   1. At the time of erection of any building or structures;
   2. When any principal building or structure is enlarged or increased in capacity by adding dwelling units, guest rooms, floor area, or seats; and
   3. Upon a change in use or occupancy-type.

B. Off-street loading areas, as required in this section, are required whenever a building is constructed that would be occupied by any manufacturing, processing, assembly, wholesaling, retailing, laundering, dry cleaning, or similar activity that requires the receiving or distribution by vehicles of material or merchandise.

5.1.3. TIME OF REVIEW

Each application for a building permit shall include information about the location and dimensions of off-street parking and loading spaces and the means of ingress and egress to such spaces. Required off-street parking areas for three or more automobiles shall have individual spaces marked, and shall be designed, maintained, and regulated so that no parking or maneuvering incidental to parking shall be on any public street, walk, or alley, so that any automobile may be parked and unparked without moving another.

5.1.4. OFF-STREET PARKING STANDARDS

Off-street parking shall be provided in accordance with the standards outlined in Table 5.1.4: Off-Street Parking Standards. If an off-street parking standard for a specific use is not included in the table, the Planning Director shall determine the minimum off-street standards required, based upon the off-street parking standards for similar uses, if any, established by Table 5.1.4, and this section.

New Hanover County, NC | Unified Development Ordinance
### 5.1.5. DESIGN STANDARDS

**A. General Standards**

All parking, loading, and service areas shall be separated from walkways, sidewalks, and streets by curbing or other suitable protective devices to prevent vehicles from intruding into these areas.

**B. Automotive Vehicle Parking Areas**

1. Off-street parking for automotive vehicles may be provided on graded, improved open space or in elevated parking structures.

2. Non-residential parking areas shall be set back a minimum of eight feet from any street right-of-way line (public or private), access easement, or passageway.

3. Parking lots shall be landscaped in accordance with the requirements of Section 5.4.6, Parking Lots.

4. Required off-street parking areas for three or more automotive vehicles shall have individual spaces marked, and shall be designed, maintained, and regulated so that no parking or maneuvering incidental to parking shall be on any public street, walk, or alley, and so that any automobile may be parked and unparked without moving another.

5. A standard parking space shall have a minimum width of eight and one-half feet, and a minimum length of 18 feet. Larger spaces may be designated provided the minimum required spaces for the use(s) served are met.

6. Parking spaces for small vehicles may be designated provided that these spaces do not occupy more than 25 percent of the total number required.

---

<td>1 space for every 400 square feet of gross floor area</td>
</tr>
</tbody>
</table>
Small parking spaces shall have a minimum width of eight feet and a minimum length of 16 feet, and shall be identified by proper signage.

7. Elevated parking structures may be permitted in residential district, B-1, B-2, and O&I districts with a special use permit issued in accordance with Section 10.3.5: Special Use Permit.

C. Water Vehicle Parking

1. Water vehicle parking spaces shall have a minimum width of 10 feet and a minimum length of 16 feet, and shall be identified by proper signage.

2. Space adjacent to a floating dock shall have a minimum length of 16 feet.

D. Loading Areas

Each loading space shall be at least ten feet in width, 25 feet in length, and shall have a height clearance of at least 14 feet.

5.1.6. ALTERNATIVE PARKING PLANS

A. Shared Parking

1. The required parking spaces for any number of separate uses may be combined in one lot, but the required space assigned to one use may not be assigned to another use, except that one-half of the parking spaces required for churches, theaters, or assembly halls whose peak attendance will be at night or on Sundays may be assigned to a use that will be closed at night and on Sundays.

2. In the case of dual uses on the same property, when the use of the property is by private membership, the parking requirement for the lesser of the two associated uses within the facility shall be reduced by one-half.

B. Remote Parking:

If the off-street parking space required by this section cannot be reasonably provided on the same lot on which the principal use is located, the parking spaces may be provided on any non-residential zoned land within 400 feet of the main entrance to the principal use.

C. Water Vehicle Parking

Water vehicle parking may be used to meet no more than ten percent of the required off-street parking requirements for commercial establishments located on or along navigable waters. If water vehicle spaces are provided, a minimum of two boat slips shall be required.

5.1.7. LOADING AREAS

For any site where off-street loading is required, a minimum of one off-street loading space shall be required, with an additional space required for every 20,000 square feet, or fraction thereof, of gross floor space in excess of 10,000 square feet.
Section 5.2. Traffic, Access, and Connectivity

5.2.1. VISIBILITY AT INTERSECTIONS IN RESIDENTIAL DISTRICTS

On a corner lot in any residential district, nothing shall be erected, placed, planted or allowed to grow in such a manner as materially to impede vision between a height of three and ten feet above the finished grades of the intersecting streets in the area bounded by the street rights-of-way of such corner lots and a line joining points along said streets rights-of-way, 50 feet from the point of intersection.

5.2.2. DEVELOPMENT ADJACENT TO ROAD, RIGHT-OF-WAY, OR EASEMENT

A. Unless exempted in accordance with B, below, every structure erected or moved shall be located on a lot adjacent to a road constructed in accordance with applicable county standards in place at the time, or to a right-of-way or easement which was platted and recorded prior to 1969.

B. The following are exempt from the requirements of this subsection:

1. Lots of record established prior to October 6, 1969 that comply with the lot area standards of the district in which they are located;
2. Structures that are to be used in conjunction with a bona fide farming operation; and
3. Building lots having access over a private driveway or easement at least 30 feet in width to a road, provided the driveway or easement is an easement appurtenant to three or fewer lots and the easement is solely owned by a lot owner, or held in common by three or fewer lot owners.

5.2.3. NCDOT DRIVEWAY PERMIT REQUIRED

No building permit for any structure shall be issued which requires NCDOT approval for a Driveway Permit until NCDOT has issued the permit approval. Evidence of approval shall accompany the application for building permit.

5.2.4. TRAFFIC IMPACT WORKSHEET

Before a nonresidential project is submitted for site plan review, the applicant shall prepare a Traffic Impact Worksheet to the Planning Director for verification.

A. Where the worksheet indicates traffic generation of 100 peak hour trips or more based upon the most current edition of the Institute of Traffic Engineers (ITE) Trip Generation Manual, the applicant shall be required to perform a Traffic Impact Analysis (TIA).

B. If a TIA is required to be submitted, the applicant or the applicant’s Traffic Engineer shall request a pre-application conference with the Planning Director, the MPO Coordinator, and an NCDOT Traffic Engineer to determine the scope of the TIA. (Electronic communication among parties may be utilized to facilitate the scoping process, when necessary.)

C. All TIAs shall be prepared by a licensed Traffic Engineer that has relevant professional experience to perform the analysis required for the TIA. Upon completion, the TIA shall be signed and sealed by the licensed and qualified Traffic Engineer and submitted to the Planning Director for review. (To the extent applicable, general guidance and standards for traffic impact analyses is outlined in
“Traffic Impact Study Standards” originally approved by the County Commissioners on May 20, 2002.)

D. The Planning Director, in collaboration with the MPO Coordinator and NCDOT, shall determine whether the TIA and proposed mitigation (if appropriate) complies with the requirements of this section, or whether additional analysis or mitigation is necessary based on identifiable cumulative impacts or special public safety situations. The collaboration shall follow procedures already established by the MPO for communication with all parties.

E. The Planning Director shall notify the applicant with comments within 30 days of receipt of the final TIA.

F. Once the mitigation measures are agreed upon by the MPO, NCDOT and County, the Wilmington MPO will prepare a memorandum approving the TIA, identifying the transportation improvements necessary to accommodate the proposed development. Mitigation measures required as part of the TIA acceptance shall be included in the final site plan submitted for review.

G. An applicant may appeal a final decision on the mitigation required by a TIA to the Board of Adjustment, by filing an appeal request within 10 working days of a final decision, to the Board of Adjustment, in the form of a letter stating the reasons for appeal and including documentation in support of the appeal. In hearing disputes, the Board of Adjustment may request an independent study by an outside source, chosen by the County and paid for by the applicant, to resolve questions of traffic impact and appropriate mitigation.

Section 5.3. Tree Retention

5.3.1. PURPOSE AND INTENT

In recognition that old growth native species trees and mature tree coverage are important natural assets that contribute to New Hanover County’s quality of life, this section designates certain trees as worthy of protection. It is the intent of this section to preserve tree coverage, mature trees, and natural resource buffers, while lessening the impact of development on surrounding properties, for the following purposes:

A. Conservation of energy by shading buildings and paved surfaces;
B. Filtering of airborne pollutants;
C. Removal of atmospheric carbon dioxide;
D. Reduction of stormwater runoff;
E. Slowing of flood waters;
F. Recharging of groundwater;
G. Protection of the cultural and historic character of the area; and
H. Increasing the value of homes and businesses.

5.3.2. APPLICABILITY

The standards of this section shall apply to all lands and development under the County’s zoning jurisdiction except:
A. Properties that are taxed on the basis of present-use value as forestland in accordance with Article 12, Chapter 105, N.C.G.S., or that are otherwise exempt under state law;

B. Forestry activity that is conducted in accordance with a forest management plan;

C. Any lot of record that is less than one acre in area and located in a residential zoning district;

D. Any residential lot that is less than one acre and shown on an approved preliminary plan; and

E. Residential subdivisions of five or fewer lots unless subject to an Additional Dwelling Unit special use permit or MDP Master Plan.

5.3.3. FORESTRY AND PROPERTY CLEARING

A. A letter of exemption for timber harvest or other exempted forestry activity must be issued by the Planning Director prior to the removal of any regulated or significant tree based on proof of exemption in accordance with NCGS 153A-452.

B. While exempted forestry activities are not subject to the tree retention requirements of this section, failure to obtain a tree removal permit prior to any timber harvest or other property clearing activity will result in the denial of a building permit, site plan approval, or subdivision approval for a period of three years, regardless of any change in ownership, if the harvest results in the removal of all or substantially all regulated or significant trees from the tract. The denial period shall be increased to five years in situations where removal of all or substantially all regulated trees was a willful violation of County regulations.

5.3.4. TREE RETENTION

A. The provisions of this section protect the following regulated trees:

1. Protected Trees, which are hardwood trees at least eight inches (8") diameter at breast height (DBH), all conifer trees at least 12" DBH, and all dogwoods and American hollies, larger than four inches (4") DBH;

2. Significant Trees, which are hardwood and conifer trees at least 24" DBH and dogwoods, American hollies, and flowering trees at least eight inches (8") DBH.

3. Specimen Trees, which are any live oak trees at least 36" DBH.

B. The Planning Director may permit or require a reduction in required street yards, landscape islands, foundation plantings, setbacks, or other dimensional, parking, or landscaping standards for the purpose of retaining significant or specimen trees.

C. A minimum of 15 trees at least two inches (2") DBH shall be retained or planted on the parcel for each acre or proportionate area disturbed by development.

D. Regulated trees within a 50-foot perimeter of the property must be retained and protected during non-exempt tree harvests. All significant trees shall be retained.

E. If existing trees and shrubs on the site where a transitional buffer is required meets at least 50 percent of the required opacity standards, then those trees and shrubs shall be retained for use in buffering and supplemented as needed with plantings, fences, and/or berms to meet the required standards. In all cases, existing trees greater than eight inches DBH shall not be removed from a 20-foot buffer strip.
along the perimeter, except where the Planning Director determines removal of such trees is necessary for the installation of utilities or other required site improvements.

5.3.5. TREE REMOVAL PERMITS

A. Unless a waiver, exemption, or exception applies in accordance with Section 10.3.9.B.2, Waivers, Exemptions, and Exceptions, no person, directly or indirectly, shall remove any regulated tree identified in Section 5.3.4, Tree Retention, from public or private property without first obtaining a tree removal permit in accordance with Section 10.3.9, Tree Removal Permit.

B. Unless a waiver, exemption, or exception applies in accordance with Section 10.3.9.B.2, Waivers, Exemptions, and Exceptions, a tree removal permit is required before any clearing, grading, or other authorizations may be issued, including building permits.

C. The removal of any specimen tree is prohibited on any parcel unless exempt according to this Ordinance. Landowners may request a variance from the Zoning Board of Adjustment related to the removal of specimen trees when site specific conditions meet the criteria for a variance according to 10.3.11: Variance – Zoning and Subdivision. If a specimen tree is removed without a permit, the penalty for this violation shall be twice the mitigation fee.

5.3.6. MITIGATION

The removal of any significant tree shall be mitigated in accordance with the following standards:

A. The total caliper inches of all significant trees proposed for removal shall be totaled and doubled. The resultant number of caliper inches must be planted back on the site with trees a minimum of 2-3 caliper inches in size, or greater.

B. If in the determination of the Planning Director, the site cannot accommodate the required number of trees, then only the amount of trees that can be accommodated on the site will be replaced, and the remainder of caliper inches shall be mitigated through a payment-in-lieu of providing on-site trees. This payment shall be made into the County Tree Improvement Fund to be used for plantings of public spaces in the general vicinity of the project. The amount of the payment shall be as set forth in the County fee schedule.

C. Any mitigation trees required as a result of the removal of significant trees shall not be counted to meet the requirements of the buffer yard, buffers, or interior parking requirements. Those trees must be provided in addition to any tree required by this section.

5.3.7. TREE PROTECTION DURING DEVELOPMENT

A. Prior to any clearing, grading, or construction activity, tree protection fencing shall be installed around protected trees or tree stands.

B. No construction workers, tools, materials, or vehicles are permitted within the tree protection fencing.

C. Existing trees specified on the required landscape plan to remain on the site to comply with the standards of this section shall be protected from vehicular movement and material storage during construction, and in the final landscape
An undisturbed area with a porous surface shall be reserved around each tree as determined by the tree’s drip ring of its natural canopy. The undisturbed area shall be protected during construction by a suitable fence, such as a wooden slat snow fence or wire fence.

D. If a regulated tree is destroyed, substantially damaged, or dies as a result of negligence on the part of the property owner within three years after completion of construction, then replacement trees shall be planted on the site with a total diameter equal to twice the diameter of the protected tree. A minimum growing area of 144 square feet shall be provided for each replacement tree. If the Planning Director determines it is infeasible or for replacement tree(s) to be accommodated on the site, then a payment may be made to the County’s Tree Improvement Fund equivalent to the pricing standards in the County fee schedule.

5.3.8. REMOVAL OF HAZARDOUS TREES

A. The Planning Director may cause or order removal of any tree or part of a tree, on public or private property, that is in an unsafe condition, damaging to sewers or other public improvement facilities, or infested by an injurious fungus, disease, insect, or other pest.

B. The Planning Director may cause or order necessary treatment for any tree on public or private property that is infested by any injurious fungus, disease, insect, or other pest when such action is determined necessary to prevent the spread of any such injurious conditions or pest and to prevent danger to persons or property, or to vegetation planted on adjacent property.

C. No foliage shall be allowed to extend from public or private property into any portion of a street right-of-way below a height of eight feet above the grade of the sidewalk at the property line or, if no sidewalk grade has been established, as measured from the center of the roadway. The Planning Director may cause or order corrective action to prevent any such condition from existing.

Section 5.4. Landscaping and Buffering

5.4.1. PURPOSE

It is the purpose and intent of this section to ensure developed properties enhance the County’s unique sense of place and support the health of its natural resources. Landscaping and buffering contribute to these goals by:

A. Maintaining the visual character of the community;
B. Screening objectionable views within and between uses;
C. Defining functional exterior spaces;
D. Reducing glare into and from developed sites;
E. Reducing dust and other pollutants suspended in the air;
F. Controlling noise and providing acoustical modification into and from developed sites;
G. Influencing wind patterns and their effects upon proposed uses;
H. Containing odors and minimizing their passage into and from developed sites;
I. Controlling the direction and velocity of surface water runoff;
J. Minimizing soil erosion;
K. Moderating interior and exterior temperatures by controlling solar radiation on buildings and paved surfaces and air pollution;
L. Maintaining the aesthetic quality of property and enhancing its values;
M. Maintaining the integrity of the County’s natural heritage;
N. Maintaining indigenous species; and
O. Transpiring water.

5.4.2. APPLICABILITY
A. Except where expressly exempted, these standards shall apply to all development within the County’s planning jurisdiction except for single family residences being constructed on lots of two acres or less.
B. In cases of expansions to existing principal structures or uses, all newly developed portions of the site shall be subject to the full landscaping requirements of this section. Landscaping upgrades for previously developed portions of the site, up to the maximum landscaping required, shall be provided in accordance with Table 5.4.2.B: Landscaping Upgrade Standards.

<table>
<thead>
<tr>
<th>Expansion</th>
<th>Total Trees Required</th>

<td>15 per acre</td>
<td>Full width required for new construction</td>
<td>8 percent of parking lot area</td>
<td>Full width as required for new construction</td>
</tr>
</tbody>
</table>

C. When a subdivision of previously developed property occurs and a building permit for new construction is obtained for any newly created parcel within two years of the date that the final subdivision plat was approved, all parcels of the original tract shall comply with the provisions outlined in Table 5.4.2.A for expansions.
D. For consecutive expansions occurring within any two-year period, the amount of the expansions shall be summed, and the maximum landscaping required for the total extent of the expansions shall be provided.

E. Notwithstanding the above requirements, expansions to existing structures of uses amounting to no more than a total of 500 square feet of gross floor area over a two-year period shall be exempt from the street yard and interior parking lot landscaping standards.

5.4.3. GENERAL STANDARDS

A. All plant materials and their spacing requirements, which are to be planted to meet the opacity and height requirements of this section, shall be either selected from the manual “Tree and Plant Materials for Landscaping” prepared by the County Planning and Land Use Department and incorporated herein by reference, available in the County Planning and Land Use Department, or shall be approved by the New Hanover County Agricultural Extension Service.

B. Existing vegetation shall be retained as described in Section 5.3: Tree Retention.

C. Up to 15 percent of the area to be landscaped may be covered with surfaces specifically intended to afford intensive use and enjoyment by employees or the public (such as walking paths, benches, and table pads, etc.).

D. At all driveways and roadway intersections, unobstructed visibility shall be maintained at elevations between three and seven feet of the pavement level within the driveway or roadway’s sight triangle, or any area required by the NCDOT.

E. It is encouraged that stormwater management systems be integrated into the landscaping plan.

F. No certificate of occupancy for any construction or renovation shall be issued until one of the following conditions is met:

   1. The required landscaping is completed in accordance with the approved plan;

   2. A bond or certified check, in an amount submitted by the developer and certified by the County Commissioners to be acceptable, has been posted and is available to the County; or

   3. An irrevocable letter of credit or deposit of funds in escrow, in an amount submitted by the developer and certified by the County Commissioners to be acceptable, is issued by a bank in a form approved by the County Attorney.

G. No surety or portion thereof, as provided for in this section, shall be released by the County Commissioners until all landscaping is installed, inspected, and approved, and until all required certification of such approval is presented and accepted by the County Commissioners.

5.4.4. TRANSITIONAL BUFFERS

A. Transitional buffers are intended to protect adjoining land uses, particularly residential, from the noise, heat, dust, lights, threats to privacy, and aesthetic impacts of more intensive land uses.
B. Transitional buffers shall be provided in accordance with Table 5.4.4.B: Transitional Buffer Standards.

<table>
<thead>
<tr>
<th>New Development on Subject Site</th>
<th>Adjacent Property</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Nonresidential uses</td>
<td>• Detached or duplex residential structure</td>
</tr>
<tr>
<td>• Attached residential developments</td>
<td>• Undeveloped land in Residential zoning district</td>
</tr>
<tr>
<td>• Mobile home parks</td>
<td>• Platted residential lots</td>
</tr>
<tr>
<td>• Development with Additional Dwelling Allowance</td>
<td>• Proposed residential lots included within an approved and valid preliminary plat for a major subdivision</td>
</tr>
<tr>
<td>• Planned Developments</td>
<td></td>
</tr>
</tbody>
</table>

C. Transitional buffers shall have a base width equal to at least 50 percent of the required setback, with a minimum width of 20 feet. The applicant may choose to increase the required buffer width to receive an equivalent reduction in a building’s setback.

D. Transitional buffers shall provide approximately 100 percent opacity and may be occupied only by natural and/or planted vegetation, berms, and fencing as specified in Table 5.4.4.B: Transitional Buffer Types and Specifications. Where a utility easement occupies a portion of the buffer, sufficient plantings must be provided outside the easement to meet the required opacity standard.

<table>
<thead>
<tr>
<th>Type</th>
<th>Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Planted Buffer Strip</td>
<td>• Planted materials shall be a minimum of six feet in height and provide approximately 100 percent opacity within one year of planting.</td>
</tr>
<tr>
<td></td>
<td>• Three rows of planted material are required.</td>
</tr>
<tr>
<td>Combination Planted Buffer Strip and Fencing</td>
<td>• Fencing shall be between six and ten feet in height</td>
</tr>
<tr>
<td></td>
<td>• Planted materials shall be located between the fence and the common property line.</td>
</tr>
<tr>
<td></td>
<td>• If solid fencing is used, two rows of planted materials a minimum of three feet in height and providing approximately 50 percent visual opacity at initial planting shall be required.</td>
</tr>
<tr>
<td></td>
<td>• If permeable fencing is used, two rows of planted materials giving approximately 100 percent of visual opacity within one year of planting shall be required.</td>
</tr>
<tr>
<td>Combination Berm and Vegetation</td>
<td>• The combined height of the berm and planted vegetation shall be a minimum of six feet and provide approximately 100 percent opacity within one year of planting.</td>
</tr>
<tr>
<td></td>
<td>• The slope of the berm shall be stabilized with vegetation. The slope shall be no steeper than 3:1.</td>
</tr>
<tr>
<td></td>
<td>• The height of the berm shall be six inches or less with a level or rounded area on top.</td>
</tr>
<tr>
<td></td>
<td>• The berm shall be constructed of compacted earth.</td>
</tr>
</tbody>
</table>
E. No activities shall occur in the buffer except for maintenance of the buffer and the installation and maintenance of water, sewer, electrical, and other utility systems where the installation causes minimal disturbance of existing vegetation. No transitional buffer required by this section may contain any building or structure or extension of any building or mechanical system. This prohibition shall apply at the time of issuance of a certificate of occupancy and at any time thereafter, and shall include but not be limited to: porches, decks, patios, HVAC components, waste containers, storage buildings, or any other fixture or structure, whether temporary or permanent.

5.4.5. SCREENING

A. The following uses shall be shielded from view from the property line of a residential use by means of a 100 percent opaque solid wall:
   1. Dumpsters or other trash holding areas;
   2. Outside storage areas;
   3. Loading/unloading areas; and
   4. Heating/air conditioning units, including roof mounted units.

B. The following uses shall be screened from the view of any public right-of-way or adjacent property by living or nonliving material, as specified in this section, at least eight feet in height:
   1. The rear side of a building where that side abuts a street right-of-way; and
   2. Any dumpster or trash receptacle storage area used in connection with any business establishment.

5.4.6. PARKING LOTS

A. Landscaping is required for parking lots to reduce the aesthetic impacts of paving or removing the natural vegetation from large areas and to reduce the noise, heat, and dust associated with parking lots, in addition to the general intent of landscaping and buffering standards as outlined in Section 5.4.1, Purpose.

B. Landscaping shall be required for all off-street parking lots with five or more spaces, or at least 2,500 square feet devoted to vehicular use. A landscaping plan shall be submitted in accordance with Section 5.4.9, Required Landscaping Plan.

C. Landscaping shall be required for parking lot perimeters in accordance with the specifications outlined in Table 5.4.6.C: Design Criteria for Parking Lot Perimeter Landscaping, provided that where a perimeter landscaping strip overlaps a required street yard or transitional buffer, the more stringent requirements shall apply.

<table>
<thead>

</tr>
<tr>
<td><strong>Dimensional Standards</strong></td>
</tr>
<tr>
<td>• The perimeter landscaping strip shall be a minimum of ten feet in width.</td>
</tr>
<tr>
<td><strong>Plantings Required</strong></td>
</tr>
<tr>
<td>• The landscaping strip shall consist of a minimum one three inch caliper evergreen or deciduous tree every 18-27 feet.</td>
</tr>
</tbody>
</table>
D. Landscaping for parking lot interiors shall be in accordance with the specifications outlined in Table 5.4.6.D: Design Criteria for Parking Lot Interiors.

### Table 5.4.6.D: Design Criteria for Parking Lot Interiors

| Design Alternatives | • When adjacent to another parking lot, the landscaping strip may be interrupted by driveway connections between parking lots. If adjacent parking lots are developed concurrently, then both properties can install a five-foot strip or footages adding up to ten feet, mutually agreed upon in writing by the two property owners.  
• A landscaped strip shall not be required between adjacent parking lots that share a double parking row slip along the middle of a drive aisle.  
• A perimeter landscaped strip may be used as part of a transitional buffer required in accordance with Section 5.5.4 |
| Dimensional Standards | • Interior landscaped areas shall be equal to eight percent of the total area to be used for parking, loading, automobile sales, driveways, internal drive aisles, and other vehicular or pedestrian use.  
• Landscaping islands, either separate from or protruding from perimeter landscaping strips, shall be a minimum of 12 feet measured from back of curb to back of curb. |
| Plantings Required | • One planted or existing tree shall be required for every 144 square feet of total interior landscaped area, with a minimum of one tree in each island.  
• At least 75 percent of trees required for interior landscaping shall be of a shade/canopy species a minimum of three inches caliper in size.  
• The remainder of interior landscaped area shall be covered with appropriate groundcover, except for designated pedestrian walkways making up no more than 15 percent of any island. |
| Design Standards | • No parking space shall be located more than 120 feet from a landscaped island.  
• All parking spaces shall be blocked or curved to prevent vehicles from encroaching more than one foot or damaging adjacent fences or screens.  
• Depressions and curb cuts shall be allowed for water quality protection. |

---

**E.** When a parking lot is within 50 feet of a right-of-way, and no other provisions of this Ordinance require a planted buffer, a low landscaped screen shall be incorporated into the street yard to provide protection from the headlights of vehicles within the parking lot, subject to the following standards:

1. The landscape screen shall consist of shrubbery, a grade change, a planted berm, or any combination thereof a minimum of three feet in height and five feet in width.

2. If the landscape screen is at least 15 feet in width, the landscape screen may be continuous and incorporated into the street yard landscaping area.

3. Depressions and curb cuts shall be allowed for water quality protection.

**F.** The Planning Director may waive all or part of the requirements of this section if:

1. The parking lot is limited to periodic or intermittent use for a vehicular parking lot for churches or recreation facilities, provided the parking lot is completely covered by grass or otherwise presents a landscaped effect.

2. The parking lot is a temporary parking lot for a period of no more than one year in length and it will not violate the purposes of this section and this Ordinance.

---

### 5.4.7. STREET YARDS

**A.** Street yard landscaping is required upon new construction of principal structures, expansions to existing structures, and changes of use whenever additional off-street parking is required.

**B.** Street yard area shall be required in accordance with the specifications outlined in Table 5.4.7.B, Street Yard Area Standards. The applicant may install the street yard in any configuration that provides the required amount of street yard square footage between the property line and any site improvements. and conforms with required street yard minimum and maximum widths.
C. For every 600 square feet of street yard area, the following landscaping shall be provided:

1. One canopy/shade tree a minimum of three inches (3") caliper in size OR three (3) understory trees a minimum of six (6) feet in height at time of planting, if overhead power lines are located above the street yard; and

2. Six shrubs, 12" in height at time of planting.

D. Street yard landscaping shall be required along all street frontages. For sites with two or more street frontages, only the primary street frontage shall be required to contain the full amount of street yard as determined in Table 5.4.7.A: Street Yard Area Standards. Secondary street frontages are required to contain 50 percent of the required street yard area.

E. If there are existing trees of a minimum two inches caliper size in the proposed street yard, the Planning Director may grant credit toward meeting tree preservation requirements. In addition, the Planning Director may require the saving of any regulated tree in the street yard area.

F. On a case-by-case basis, the Planning Director may approve alternate planting materials or substitutions to street yard planting requirements where requirements would not be practical due to existing vegetation. Such substitutions must be determined to be in keeping with the purpose and intent of this section.

<table>
<thead>
<tr>
<th>Zoning District or Use</th>
<th>Required Area</th>
</tr>
</thead>
</table>
| B-2, CS, I-1, I-2, AC            | • 25 square feet for every linear foot of street yard frontage  
|                                  | • Minimum street yard width: 12.5 feet                      
|                                  | • Maximum street yard width: 37.5 feet                      |
| b-1, CB, O&I, EDZD, UMXZ         | • 18 square feet for every linear foot of street yard frontage  
|                                  | • Minimum street yard width: 9 feet                        
|                                  | • Maximum street yard width: 27 feet                       |
| Non-Residential Uses in Residential Districts | • 12 square feet for every linear foot of street yard frontage  
|                                  | • Minimum street yard width: 8 feet                        
|                                  | • Maximum street yard width: 18 feet                       |

- The area of any walkways, sidewalks or other bicycle and pedestrian facilities, and transit amenities shall be subtracted from the base street yard area required above to get the total required street yard area.
- Areas designated for stormwater functions, except piped areas, shall not be included in the required street yard area.
- The applicant may choose to increase the required square footage per linear foot up to 25 percent to receive an equivalent reduction in the building’s front yard setback.
- The applicant may install the street yard in any configuration that provides the required amount of street yard square footage between the property line and any site improvements as long as it remains in compliance with the minimum and maximum widths outlined above.
G. For all lots of record two acres or less in size, if the Planning Director determines that the essential site improvements cannot be accommodated under these requirements, then the required street yard area may be reduced by one-half, but in no case shall it be reduced less than one-half.

H. Walkways, sidewalks, or other bicycle and pedestrian facilities, fountains, walls or fences, and transit amenities shall be permitted within the street yard; however, parking areas shall not be permitted.

5.4.8. FOUNDATION PLANTINGS

A. Foundation plantings located between the building face and the parking lot or drive aisle shall be required for all portions of buildings adjacent to parking lots or internal drive aisles.

B. The following minimum standards are required, though additional landscaping is encouraged:
   1. The foundation planting area shall be a minimum of 12 percent of the area of the building face adjacent to the parking area or internal drive;
   2. The foundation planting area shall be planted as landscaped areas of sufficient variety, height, and size, with plantings listed in “Tree and Plant Materials for Landscaping.”

C. Exemptions from foundation plantings may be granted by the Planning Director when the following circumstances exist or when any of the following conditions are proposed on the site:
   1. For those portions of buildings that have drive-up services (i.e., pharmacies, banks, fast food restaurants, dry cleaners, photo shops, etc.); and
   2. On the rear side of a building when less than 10 percent of the total required parking is located in the rear of the building and the rear is not adjacent to any public right-of-way.

5.4.9. REQUIRED LANDSCAPING PLAN

A. Before or at the time of application for a building permit, a landscaping plan shall be submitted for all projects with required landscaping and/or buffering.

B. The landscaping plan shall include the following:
   1. Date of plan preparation;
   2. Project name and description of land use;
   3. Project owner and mailing address;
   4. A map at a scale of 1" = 100’ or less showing:
      a. North arrow;
      b. Scale;
      c. Approximate locations and species of all existing regulated trees and their canopy drip line. If groves of the protected trees exist that will not be removed or disturbed, it is permissible to label the grove as
such on the map, stating the approximate number of protected trees and species mix, without specifying data on each individual tree.

d. Locations, dimensions, and square footage of required buffer strips, screens, and required landscaping areas;

e. Details of required landscaping showing species, dimensions, and spacing of planted materials and the use and protection of existing vegetation;

f. Location and square footage of structures and parking lots;

g. The zoning district classification of adjacent properties;

h. Approximate locations of all trees greater than eight inches (8") DBH within required buffers, and all areas of natural vegetation to be used as part of the buffer;

i. Setbacks of all structures and shielding of certain uses, as required;

j. All existing and proposed utilities, and if applicable, their associated easements;

k. Location of any Conservation Resources associated with the parcel including any Rare and Endangered Species in accordance with the North Carolina Wildlife Resources Commission and the federal Endangered Species Act.

5. The proposed schedule for landscaping;

6. Notes on the plan stating that prior to any clearing, grading, or construction activity, tree protection fencing will be installed around protected trees or groves of trees. And that no construction workers, tools, materials, or vehicles shall be permitted within the tree protection area;

7. Reasons for removal if any protected tree is intended to be cleared from the site. Suitable reasons for clearing one or more of these trees include such factors as trees cover more of the site area than is required to be landscaped and the parcel will be fully used, or that it is impossible to position buildings on the parcel and meet setback requirements without tree removal. Unsuitable reasons include such factors as the need for more parking than the minimum required by this Ordinance is desired, or that non-selective clearing by bulldozers is less expensive than selective clearing by chainsaw.

5.4.10. MAINTENANCE

A. All existing vegetation that is used to meet the landscaping requirements, all required planted living material, and all required berms shall be maintained by the owner of the property on a continuing basis.

B. Any planted material that becomes damaged or diseased or dies shall be replaced by the owner within 60 days of the occurrence of such condition. If the Planning Director determines there are seasonal conditions that will not permit the timely replacement of the vegetation (e.g. too hot or too cold for successful replanting), the Planning Director may modify the requirement until a time certain when the replanting would be successful.
C. Artificial fencing and nonliving screening buffers shall be maintained, cleaned, and repaired by the owner of the property on a continuing basis. Such fencing shall be kept free of litter and advertising.

Section 5.5. Exterior Lighting
All site lighting for non-residential, mixed use, or multi-family uses shall be located and directed so as not to shine or reflect directly onto any adjacent residential zoning districts and/or uses.

Section 5.6. Signs

5.6.1. PURPOSE
The purpose of this section is to coordinate the type, placement, and physical dimensions of signs within the different zoning districts; to recognize the commercial communication requirements of all sectors of the business community; to promote both renovation and proper maintenance of signs; and to guarantee equal treatment under the law through accurate record keeping and consistent enforcement. The general objectives of these standards are to promote the health, safety, welfare, convenience and enjoyment of the public, and in part, to achieve the following:

A. Safety - To promote the safety of persons and property by providing that signs:
   1. Do not create a hazard due to collapse, fire, decay, collision, or abandonment;
   2. Do not obstruct fire-fighting or police surveillance; and
   3. Do not create traffic hazards by confusing or distracting motorists, or by impairing the driver's ability to see pedestrians, obstacles, or other vehicles, or to read traffic signs.

B. Communications Efficiency - To promote the efficient transfer of information in sign messages by providing that:
   1. Those signs which provide messages and information most needed and sought by the public are given priorities;
   2. Businesses and services may identify themselves;
   3. Customers and other persons may effectively locate a business or service;
   4. No person or group is arbitrarily denied the use of the sight lines from the public right-of-way for communication purposes; and
   5. Persons exposed to signs are not overwhelmed by the number or size of messages presented, and are able to exercise freedom of choice to observe or ignore sign messages, according to the observer's purpose.

C. Landscape Quality and Preservation - To protect the public welfare and to enhance the appearance and economic value of the landscape by providing that signs:
   1. Do not interfere with scenic views;
   2. Do not create a nuisance to persons using the public rights-of-way;
3. Do not constitute a nuisance to occupancy of adjacent and contiguous property by their brightness, size, height or movement;
4. Are not detrimental to land or property values; and
5. Contribute to the special character of particular areas of the community, helping to orient the observer within it.

D. Outdoor Advertising Signs

1. Outdoor advertising signs are herein regulated for the purposes of regulating excess signage, encouraging the positive economic development of the County, preserving and improving tourism views, promoting the safety of the traveling public, protecting existing property values in both residential and nonresidential areas, preventing the overcrowding of land, and protecting the aesthetics of the County.

2. The regulations are designed to prevent their over-concentration, improper placement, and excessive height, bulk, number and area. It is recognized that, unlike on-premise identification signs, which are in actuality a part of a business, outdoor advertising is a separate and distinct use of the public thoroughfare. With a view to this distinction, outdoor advertising signs are regulated differently from on-premise signs.

5.6.2. GENERAL PROVISIONS

A. Compliance with Building and Electrical Codes

All signs shall be constructed in accordance with the requirements of the local and state Building Code and the National Electrical Code.

1. Anchoring

   a. Signs shall be suspended by nonrigid attachments that will allow the sign to swing in a wind.

   b. All freestanding signs and outdoor advertising signs shall have self-supporting structures erected on or permanently attached to concrete foundations.

   c. All portable signs on display shall be braced or secured to prevent motion.

2. Wind Loads

   Solid signs, and skeleton signs other than wall signs, shall be designed to withstand a wind load according to the North Carolina State Building Code.

3. Additional Construction Specifications

   a. No signs shall be erected, constructed, or maintained so as to obstruct any required exit, fire escape, window or door opening used as a means of egress.

   b. No sign shall be attached in any form, manner or shape which will interfere with any opening required for ventilation, except that signs
may be erected in front of and may cover transom windows when not in violation of the provisions of Fire Prevention Codes.

c. Signs shall be located in such a way as to maintain horizontal and vertical clearance of all overhead electrical conductors in accordance with the National Electrical Code specifications.

4. Maintenance and Removal

Should any sign become in danger of falling or is deemed otherwise unsafe in the opinion of the Building Safety Director, the owner, or the person or firm maintaining the same, shall upon written notice from the Building Safety Director, forthwith in the case of immediate danger and in any case within 10 days, secure the sign in a manner to be approved by the Building Safety Director in conformity with the provisions of the state building code, or remove the sign. If the sign is not removed, the Building Safety Director or his designated agent may initiate legal procedures to obtain the necessary court orders to remove such sign at the expense of the owner or lessee.

B. Abandoned Signs

Any on-premises sign relating to any business or other use shall be removed by the owner of the sign or property owner within 60 days after such business or activity has been vacated or terminated. If the sign has not been removed after the removal time has expired and after proper written notification is given, the Planning Director may initiate legal procedures to remove the sign(s) at the expense of the owner or lessee.

C. Sign Measurements

1. General - For the purpose of this section, the area, in square feet, of any sign shall be computed by the smallest square, triangle, rectangle, circle, or combination thereof, which will encompass the entire sign. In computing the sign area in square feet, standard mathematical formulas for known or common shapes will be used. In the case of irregular shapes, straight lines drawn closest to the extremities of the shape will be used.

2. Multiple Faces - Where a sign has two or more faces, the area of all faces shall be included in determining the area of the sign, except where two such faces are placed back-to-back and are at no point more than two feet from one another. The area of the sign shall be taken as the area of the larger face if the two faces are of unequal area; if the areas of the two faces are equal, then the area of one of the faces shall be taken as the area of the sign.

D. Lighting

Unless otherwise specified in this section, all signs may be illuminated. However, no sign regulated by this Ordinance may utilize:

1. An exposed incandescent lamp with an external reflector without a sunscreen or comparable diffusion;

2. An exposed incandescent lamp unless a screen is attached; or
3. A revolving beacon light.

E. Exemptions

This section shall not relate to building design, nor shall this section regulate official traffic signs, gravestones, lighting, or displays of a seasonal, religious, or traditional nature (e.g., Christmas or Chanukah lights or decorations, Thanksgiving decorations, Halloween lights or decorations, etc.) which are not commercially-oriented, scoreboards on athletic fields, or any display or construction not defined as a sign. The regulations of this section shall not apply to any sign that is not visible from the perimeter of the subject property.

F. Permits Required

Unless otherwise specifically provided, a sign permit shall be obtained in accordance with Section 10.3.8, Zoning Compliance Approval, before commencing the construction, alteration, erection, addition to, or moving of any sign or outdoor advertising sign or part thereof.

G. Indemnifications and Insurance

1. All persons involved in the maintenance, installation, alteration, or relocation of signs near or upon any public right-of-way or property shall agree to hold harmless and indemnify the County, its officers, agents, and employees, against any and all claims of negligence resulting from such work insofar as this section has not specifically directed the placement of a sign.

2. No person may engage in the business of erecting, altering, relocating, constructing, or maintaining signs without a valid contractor's license and all required licenses on the state and federal level.

3. All persons involved in the installation, maintenance, relocation, or alteration of signs shall maintain all required insurance and shall file with the state a satisfactory certificate of insurance to indemnify the city, state, or County against any form of liability to a minimum of $100,000.

H. Prohibited Signs

In all zoning districts the erection, construction, location or the use of any sign is prohibited as follows. Such signs, if deemed to create a public safety hazard by the Building Safety Director, may be removed immediately; otherwise, prohibited signs shall be removed as provided under Section 5.6.4.K. See Table 5.6.2.H: Permitted and Prohibited Signs, by Zoning Districts.

1. Signs in Public Right-of-Way. No sign shall be permitted on or protrude into a public right-of-way, street, or passageway, except as provided specifically for in this section.

2. Signs Attached to Public Property or Utility Structures. Except for signs installed by or with the approval of an appropriate governmental agency, no sign shall be attached to, hung, or painted on any curb stone, hydrant, lamppost, street trees, barricade, temporary walk, telephone pole, telegraph pole, electric light pole, or other utility pole, public fence, or on a fixture of a fire alarm or police call system within any public right-of-way.
No detached sign shall be located closer than 10 feet in any direction from any power or transmission line. (NOTE: This does not include the supporting structure, e.g., the power pole.)

3. Signs Constituting Traffic Hazards. No sign shall be permitted whereby its location, nature or type constitutes or tends to constitute a hazard to the safe and efficient operation of vehicles upon any public right-of-way, street, or passageway. No sign shall be permitted that would obstruct the line of sight of motorists or pedestrians at intersections, driveways, or along any public right-of-way, street, or passageway. No sign shall be permitted, as specified in Section 136-32.2, N.C.G.S., that would obstruct or resemble traffic signs or signals, or would tend to be confused with a flashing light of an emergency vehicle.

</table>
4. Signs Constituting Fire Hazards. No sign shall be permitted to prevent free ingress and egress from any door, window, or fire escape.

5. Signs Pertaining to Specified Activities or Containing "Vulgar" Words. No sign shall contain statements, words, or pictures which describe or display "specified anatomical areas" or "specified sexual activities," as defined in this Ordinance or which contain words which are classified as "vulgar" or "vulgar slang" in The New College Edition of the American Heritage Dictionary of the English Language.

6. Moving Signs. No sign shall be permitted containing or consisting of banners, posters, pennants, ribbons, balloons, streamers, or other similarly moving devices or ornamentation, except as specifically provided in this section.

7. Flashing Signs and Rotating Light Beams. No sign shall be permitted which contains or utilizes revolving or rotating beams of light of stroboscopes. No sign shall be erected which flashes, except for time and temperature signs.

8. Signs on Vehicles. No sign shall be placed on a vehicle or trailer which is parked or located for the primary purpose of displaying the sign (this does not apply to permitted portable signs, or to signs or lettering on buses, taxis, or vehicles operating during the normal course of business).

9. Floating Signs. Floating Signs are not permitted.

I. Signs Which do not Require a Permit

The following types of signs are exempted from the sign permit requirements, but must comply with all other requirements of this section.

1. Signs used by churches, synagogues, or civic organizations.

2. Construction Signs. One construction sign for each street frontage of a construction project, not to exceed 20 square feet in sign area in residential zoning districts or 35 square feet in sign area in all other zoning districts. Such signs may be erected ten days prior to beginning of construction and shall be removed within 30 days following completion of construction.
3. Directional/Information Signs. Four freestanding directional/information signs per lot, not to individually exceed three square feet in sign area or 30 inches in height.

4. Individual Political Signs. Non-illuminated political signs, not to individually exceed 12 square feet in sign area. Such signs shall be removed 30 days following the applicable election or referendum. Political signs may be placed only on private property and only with the permission of the property owner, provided that each candidate for political office, or the candidate's local representative in the case of statewide or national offices, shall apply for a general permit for all personal campaign signs, indicating that the candidate is aware of all regulations concerning political signs, that all supporters receiving the signs will be advised of these regulations and ordered to follow them, and that the signs shall be removed as required by these regulations.

5. Public signs or notices or any sign relating to an emergency.

6. Real Estate Signs. One non-illuminated real estate sign per street frontage, not to exceed 20 square feet in sign area. Such signs must be removed 30 days following rental, sale, or lease.

7. Incidental Signs not to exceed six square feet in aggregate sign area per occupancy.

8. Residence signs, Nameplates, or street address numbers, not exceeding four square feet in area.

9. Signs used for bona-fide navigational aids.

10. Flags.

11. Off-Site Real Estate Signs. Off-site real estate signs which are generic signs with display content limited to a directional arrow and/or one descriptive phrase of "open house" or "home for sale," and allowed off the premises from where the real estate product is being offered that comply with the following requirements:

   a. Be located on private property only with written permission of the applicable property owner. The property owner or real estate agent shall be subject to the applicable penalties for violation of these provisions.

   b. Be no greater than four square feet in area.

   c. Be no higher than three (feet, measured from the adjacent ground elevation to the uppermost portion of the sign.

   d. Only locate one sign per intersection.

   e. Not block any sight distances of any intersection.

   f. Not be placed within a public or private road right-of-way.

   g. Be freestanding.

   h. Not be placed on trees, utility posts, traffic control signs, or other signs.

   i. Not have lighting, movable elements, or flags.
j. Comply with the following allowable times of placement:

1. A sign directing attention to a temporary sales office or model unit in a development of multiple lots or units offered for sale may remain in place seven days a week, for as long as the temporary sales office or model unit is on site.

2. A sign directing attention to any property or properties other than a model unit or sales office as specified in paragraph (a), may remain in place from 4:00 p.m. on Friday to 8:00 a.m. on the following Monday. On the following specified holidays, signs may be posted after 4:00 p.m. the day prior to the actual holiday and must be removed by 8:00 a.m. the day following the holiday:

   i. New Year's Day
   ii. Martin Luther King, Jr. Day
   iii. Good Friday (Friday before Easter)
   iv. Azalea Festival - Friday
   v. Memorial Day
   vi. Independence Day

J. Signs Which Require a Permit

1. Subdivision Identification Signs

   Two subdivision identification signs per entrance, not to exceed 35 square feet each in sign area. Identification signs may be located on privacy and freestanding walls. Unless otherwise specified, if the identification sign is located on a freestanding wall, the wall shall not exceed six feet in height, or the height of the subdivision privacy wall, whichever is greater.

2. Identification Signs

   One identification sign per apartment or condominium complex entrance, not to exceed 35 square feet in sign area. Identification signs may be located on walls provided such walls do not exceed four feet in height and 75 square feet in area.

3. Freestanding Signs in Residential Areas

   For permitted nonresidential uses, including churches and synagogues, one freestanding sign per frontage, not exceeding 35 square feet in sign area, and one marquee sign not to exceed 25 feet in sign area. All permitted freestanding signs shall have a maximum height limit of six feet and shall have a minimum setback of five feet from any property line. For
permitted freestanding signs which are to be illuminated, such illumination must come from a light source which is external to the sign itself.

4. Principal Use Signs
   a. Freestanding Signs
      1. Primary. One primary freestanding sign per premises, in accordance with Table 5.6.2.J.4.a: Freestanding Sign Standards.

NOTES:
[1] Number of lanes refers to the ultimate number of lanes based upon existing roadway conditions or upon construction plans approved as part of the current NC DOT Transportation Improvement Program.
[2] Notwithstanding the minimum and maximum front setback requirements indicated above, primary freestanding signs which do not exceed six feet in height and are less than 76 percent of the maximum sign area established above, may be located within five feet of the front property line and shall have no maximum front setback.
[3] Front Setback refers to the setback from the front or corner side property lines.

2. Auxiliary. An additional (Auxiliary) freestanding sign shall be allowed for property having in excess of 100 linear feet of road frontage; one auxiliary freestanding sign shall be permitted for each 100 linear feet of road frontage. Auxiliary signs may contain up to 50 percent of the allowable area of primary freestanding signs or 20 square feet, whichever is greater. Auxiliary signs shall not be permitted within 50 feet of any other auxiliary or primary sign located on the same parcel of property. No more than two auxiliary freestanding signs shall be permitted on each road frontage for each parcel of property.

3. Carolina Beach Road. Freestanding signs along Carolina Beach Road shall comply with the provisions of this section except that only one freestanding ground sign not to exceed six feet in height and a maximum surface area of 150 square feet is permitted.

b. Wall Signs. Up to five wall signs per occupancy, in aggregate not to exceed 20 percent of the area of the wall to which the signs are attached, up to a maximum size of 250 square feet per each occupancy.
c. Under-Canopy Signs. One under-canopy sign per occupancy, not to exceed four square feet in sign area.

d. On-Premises Window Signs. Any principal building may install on-premises window signs, provided:
   1. The area of such signs shall not exceed an aggregate area equal to 10 percent of the total ground floor glassed window area of the building.
   2. Such signs, if located inside the window, may be neon signs.
   3. Such signs are prohibited above the second floor occupancy.

e. Special regulations and allowances for principal use signs:
   1. Corner Lots. Where an occupancy is on a corner or has more than one main street frontage, an additional wall sign and an additional freestanding sign are allowed on the additional frontage, not to exceed the number and size limitations of other allowed wall and freestanding signs.
   2. Minimum Clearance. All freestanding, awning, marquee, and under-canopy signs shall have a minimum clearance of nine feet over any pedestrian use area.
   3. Awning Signs. Three awning signs per occupancy, not to exceed 20 percent of the surface area of an awning.
   4. Multi-Unit Signs. Multi-unit signs consist of three or more individual identification signs. These individual signs shall be designed to reflect a unified graphic appearance (e.g., size and material type), as determined by the Planning Director. Individual commercial logos are permitted on multi-unit signs so long as they do not constitute more than 25 percent of the area of the applicable individual occupancy identification sign.

5.6.3. TEMPORARY AND SPECIAL EVENT SIGNS

A. Balloons / Blimps
   1. Allowed for special events with a permit for up to seven days of consecutive use, five times per calendar year per location, subject to the following conditions:
      a. The balloon or blimp may not be more than 1,000 cubic feet in size, nor shall the total of the longitudinal and latitudinal dimensions of the device, measured along their axes, exceed 37 linear feet;
      b. The balloon or blimp shall be securely anchored at a point within the applicable setback for buildings in the zoning district where the balloon or blimp is flown
      c. The balloon or blimp may not be flown more than 50 feet in the air unless it is located at least 100 feet from any active public roadway; its height may thereafter be increased in proportion to its distance from the roadway, to a maximum of 100 feet. (Example: if the device...
is anchored 125 feet from a road, it may be flown at a height of 75 feet;

d. No balloon or blimp shall be flown in windy conditions (sustained winds of 25 m.p.h. or more) or inclement or stormy weather; all applicable state or federal regulations must be observed;

e. No balloons or blimps may be flown within a one-mile radius of another such device; and

f. No device authorized by this section may consist of more than one balloon or blimp, or have attached to it any streamers, banners, or other paraphernalia.

2. For purposes of this provision, a balloon or blimp may display advertising copy that is not specific to the premises or establishment where the special event is occurring, but may not be displayed at any other premises.

3. "Special events," as used in this provision includes grand openings, special sales and other promotional activities. If, in the opinion of the Building Safety Director, any balloon or blimp is creating or contributing to a hazardous situation, the Director may direct that it be removed or that the manner of its display be altered to remove the hazard.

B. Banners

Banners are allowed for special events with a permit, for up to 30 days of consecutive use, two times per calendar year (separated by a minimum of 30 days). There shall be no more than two banners per occupancy, per permit. In the case of public parks, each group or activity will be considered a separate occupancy. Museums and cultural arts centers are permitted continuous, year-round display of one banner and there is no time constraint imposed upon any one banner's display. A second banner may be permitted in compliance with the banner restrictions applied to other uses. For grand openings, or other special events, a banner may be used for no more than 30 days for one time per calendar year. These banners are allowed with a permit in the Commercial and Industrial districts.

C. Flags

Flags are allowed as specified in Table 5.6.3.C: Flag Standards by Zoning District. Ground-mounted flagpoles shall not exceed height limits established in Table 5.6.3.C. Roof-mounted flagpoles shall not exceed the maximum height permitted in each zoning district for roof-mounted antennae. No more than two flags shall be permitted per each flagpole, not to exceed the cumulative area established in Table 5.6.3.C. The United States, North Carolina, city and county flags are exempt from all restrictions of this article.

5.6.4. OUTDOOR ADVERTISING SIGNS

A. Where Permitted

Outdoor advertising signs and structures that comply with the provisions of this Ordinance shall be permitted in the I-1, I-2 and AC zoning districts, provided the specific outdoor advertising sign location is 400 feet or more from any Residential zoning district, place of worship, public park, or school. Outdoor advertising signs shall not be constructed within areas designated under the SHOD district. Outdoor advertising signs shall not be permitted in, upon, or over any navigable public waterway, marsh, or within 400 feet landward of the mean high water line.

B. Location, Setbacks, and Spacing of Outdoor Advertising Signs

1. Setbacks. Each outdoor advertising sign shall comply with the applicable setback requirements of the district in which it is located. In no case, however, shall an outdoor advertising sign be located less than 10 feet from any right-of-way or property line.

2. Corner Lots. No part of an outdoor advertising sign may be located within a triangular area formed by the street right-of-way lines and a line connecting them at points 50 feet from the right-of-way intersection.

3. Spacing of Outdoor Advertising Signs. No part of any outdoor advertising sign shall be located less than 1,000 feet from any part of another outdoor advertising sign.

D. Pennants

Pennants are prohibited except as navigational aids, or if used by a religious activity or by an educational or charitable organization (see Flags).

E. Portable Signs

Portable signs are allowed with a permit for up to 30 days of consecutive use, two times a calendar year (separated by a minimum of 30 days), for parcels in the Commercial or Industrial districts. They are prohibited elsewhere. Portable signs cannot exceed 35 square feet in size and six feet in height, or be located within five feet of any property line. That shall not be over one portable sign per parcel. At the expiration of the permit period, the sign, which includes the lettering as well as the signage cabinet, shall be removed.
4. Back of Outdoor Advertising Sign. The backs of all outdoor advertising signs shall be painted in a neutral color to blend with the surrounding area and to prevent the reflection of car lights and sunlight.

C. Single Outdoor Advertising Sign Structure

An outdoor advertising sign shall be considered as one sign structure when it is designed to be viewed from:

1. One direction and consists of a single face sign placed in such a manner to be viewed by one directional flow of traffic; or

2. Two directions and consists of two sign faces arranged either back-to-back or in a V-shape.

3. In no case shall there be more than one sign face per directional flow of traffic.

D. Area and Height Requirements for Outdoor Advertising Signs

1. No outdoor advertising sign facing streets with four or more traffic lanes may exceed 150 square feet; outdoor advertising signs facing streets with fewer than four traffic lanes may not exceed 75 square feet. The allowable sign area of outdoor advertising signs with equal size and shape for both double-faced (back-to-back) and V-type outdoor advertising signs is measured by computing the area of only one side of the outdoor advertising sign. Both sides of a double-faced or V-type outdoor advertising sign shall be of equal size. No point on either side shall be more than 15 feet from the nearest point of the other side.

2. No outdoor advertising sign or part thereof, including base, apron, supports, supporting structures, and trim, may exceed 30 feet in height. Rooftop outdoor advertising signs are prohibited.

E. Inspection of Outdoor Advertising Signs

The Building Safety Director shall inspect all outdoor advertising signs periodically to determine that the same are in a safe condition and meet the requirements set forth in this section.

F. Clearance for Overhead Electrical Conductors

Outdoor advertising signs shall be located in such a way that they maintain horizontal and vertical clearance of all overhead electrical conductors in accordance with National Electrical Code specifications, provided that no outdoor advertising sign, except official traffic signs, shall be installed closer than 10 feet horizontally or vertically from any conductor or public utility guy wire.

G. Illumination

All outdoor advertising sign illumination devices shall be in conformance with the North Carolina State Building Code, Volume IV, and all other state and local codes governing illumination. All illumination shall be designed to be contained to the sign area of the outdoor advertising sign.
H. Back of Sign
The backs of all outdoor advertising signs shall be painted in a neutral color to blend in with the surrounding area.

I. Trimming of Vegetation Prohibited
There shall be no trimming of vegetation on public property or rights-of-way to make any outdoor advertising sign more visible.

J. Maintenance
All outdoor advertising signs shall be maintained in a state of good repair. Whenever it shall appear to the Building Safety Director that any outdoor advertising sign has been constructed or is being maintained in violation of the terms of this section or is unsafe or insecure, such outdoor advertising sign shall either be made to conform with all outdoor advertising sign regulations or shall be removed at the expense of the owner, within ten days after written notification thereof by the Building Safety Director.

K. Removal of Obsolete Outdoor Advertising Signs
Outdoor advertising sign messages which advertise a discontinued activity or use of a building or premise shall be removed within 60 days from the date the activity or use was terminated. Outdoor advertising signs advertising events such as shows, displays, festivals, circuses, fairs, athletic contests, dances, fund drives, elections, exhibits, meetings, conventions, and the like shall be removed within 30 days after the date of termination of such events.

Section 5.7. Conservation Resources

5.7.1. PURPOSE
The purpose of these conservation resources standards is to protect important environmental and cultural resources within the County. Protection of these resources is necessary to:

A. Maintain the County's diverse and ecologically important natural systems;
B. Preserve the County's estuarine systems important for finfishing and shellfishing;
C. Provide open space; and
D. Retain the County's archaeological and historical heritage.

5.7.2. APPLICABILITY
A. Unless exempted by subsection C below, the development and improvement of a parcel of record existing on December 1, 1984, including the division of land, shall be subject to these performance controls, if the parcel is associated with any conservation resources identified in Table 5.7.2.A: Minimum Distinct Area of Conservation Resources, having a corresponding minimum distinct area identified in Table 5.7.2.A. A parcel is considered to be associated with a conservation resource if either the resource is contained partially or wholly on the parcel or if the resource is located next to a parcel such that the resource setback specified in Section 5.7.4, Additional Performance Controls, extends into the parcel.

</tr>
</tbody>
</table>

B. Official maps of and information concerning resources identified in subsection A above are available for review at the County Planning and Land Use Department. These maps serve as an initial resource to determine if a parcel is associated with conservation resources identified in subsection A above, but all conservation resources outlined above shall be identified on all required site plans, regardless of whether they are identified on County maps.

C. The following are exempt from the requirements of this article:

1. The development of one single family home detached structure, one residential duplex, or the location of two or fewer mobile homes on a parcel.
2. Commercial, industrial, office or institutional development involving a land disturbance of less than one acre in area.
3. The development or division of a parcel that meets both of the following conditions:
   a. No part of the development or division shall be located within a distance equal to or less than the setback distance specified in Section 5.7.4, Additional Performance Controls, of any conservation resource or space existing on the parcel or on a contiguous parcel of record.
   b. No part of the development or division shall be located on any portion of the parcel that is part of the upper drainage basin for any conservation resource or space on the parcel or within the specified setback on a contiguous parcel of record.

5.7.3. CONSERVATION SPACE GENERAL PERFORMANCE CONTROLS

The general performance controls for conservation space in this section apply to all development subject to this article.
A. Required Amounts of Conservation Space

1. Conservation space is defined as that portion of the conservation resource that shall be preserved, as determined by this section (5.7.3).

2. Conservation space may not be reserved provided the development or subdivision of the parcel meets the condition specified in Section 5.7.2.C.3.a.

3. If the development or subdivision does not meet the condition specified in Section 5.7.2.C.3.b, then, the development or subdivision shall meet applicable drainage and setback regulations specified in Section 5.7.3.F, Design Storm, and Section 5.7.4, Additional Performance Controls.

4. Conservation space shall not be required to be reserved for the conservation resources identified in Table 5.7.3.A.4: Conservation Resources Not Requiring Conservation Space, unless the total acreage of minimum distinct areas on the parcel of record exceeds the minimum identified in Table 5.7.3.A.4.

5. The required amount of conservation space shall be determined using Table 5.7.3.A.5: Work Table for Determining Required Conservation Space Developable Land, using the four steps set out below, which refers to the columns in Table 5.7.3.A.5.

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>Swamp forest</td>
<td>5</td>
</tr>
<tr>
<td>Pocosin</td>
<td>5</td>
</tr>
<tr>
<td>Savannah</td>
<td>5</td>
</tr>
</tbody>
</table>

6. The total amount of conservation space that shall be reserved shall be equal to or exceed the total minimum conservation space calculated in step three in subsection A above. The total minimum conservation space shall be allocated to and reserved for conservation resource areas in acreage equal to or exceeding the minimum acreage calculated for the resources in column 4 of Table 5.7.3.A.5: Work Table for Determining Required Conservation Space Developable Land.

TOTAL MINIMUM CONSERVATION SPACE
TOTAL PARCEL ACREAGE
MINUS TOTAL MINIMUM CONSERVATION SPACE
EQUALS MAXIMUM DEVELOPABLE LAND

B. **Arrangement of Conservation Space**

Conservation space shall be reserved in contiguous blocks or in close proximity to the greatest extent possible in order to prevent the scattering of such space and to increase effectiveness in their management.

C. **Transfer of Conservation Space Requirements Between Resource Conservation Areas**

In order to provide flexibility in site design, the minimum acreage of conservation space required in column 4 of Table 5.7.3.A.5: Work Table for Determining Required Conservation Space Developable Land, for any one
conservation resource area may be reduced by any desired amount provided, however, that the minimum conservation space required for a different conservation resource area with an equal or higher ranking is increased by an equal or higher amount. For instance, assume that a parcel has ten acres of swamp forest and fifteen acres of fresh marsh. According to the worktable, swamp forest has a conservation factor of .5 and fresh marsh as a conservation of .8. Therefore, at least 5 acres of swamp forest must be reserved as conservation space (10 acres x .5 = 5), and at least twelve acres of fresh marsh must be reserved (15 acres x .8 = 12.0 acres). If the developer, however, wishes to develop seven acres of swamp forest, he may transfer two acres of the conservation space requirement for swamp forest to the fresh marsh because fresh marsh has a higher importance value (6) than does swamp forest (5). As a result of the transfer, therefore, all fourteen acres of the fresh marsh would be required to be preserved as conservation space while only three acres of swamp forest would be required to be preserved.

D. Improvements

Conservation space shall not be cleared of vegetation, shall not have its natural drainage system significantly altered, and shall not be developed in any manner that would negatively impact the conservation resource, with the following exceptions:

1. Improvements that would either protect or enhance the enjoyment of the conservation resource. Such measures not causing significant impact include, but are not limited to, walkways, self-guided trails, protective fences, docks and boat ramps.

2. Access to other parts of the parcel. If a part of the parcel may be developed but is inaccessible due to the existence of a conservation resource area, a road and/or utilities may be constructed through the conservation resource area. The road and/or utilities, however, shall be designed to the greatest extent practical to minimize impact to the conservation resource.

3. Access to the waterfront. If the entire waterfront along a parcel is inaccessible due to the existence of required conservation space, a boat ramp, dock, or pier may be built for boating facilities in the conservation space, subject to relevant State and Federal permits. The facilities, however, shall be designed to the greatest extent practical to minimize impact to the conservation resource.

E. Methods of Conservation Space Preservation

Conservation space may be preserved by any of the following means:

1. Dedication of the conservation space or of a conservation easement in perpetuity to and acceptance by the County for use as parks, recreation areas, or other suitable public purposes.

2. Dedication for suitable public purpose of the conservation space or of a conservation easement in perpetuity to and acceptance by State or Federal agency or by a private, non-profit charitable organization qualified
to accept such dedications in accordance with the Federal Internal Revenue Code.

3. The owner of the parcel on record may retain sole ownership of the conservation space provided the conservation space has not been used in calculating residential density. The conservation space shall not be subdivided.

4. The conservation space may become the property of a homeowner's association under the following conditions:

   a. Such conservation space shall remain undivided and no lot or unit owner or any other person shall bring any action for partition or division of any part thereof except as provided in Chapter 47A (Unit Ownership Act) of the General Statutes. Each lot or unit owner's undivided interest shall be preserved through covenants running with the land. Title to such areas shall be encumbered for the perpetual benefit of the public generally or the private properties in the development, and all future use shall be consistent with the conservation space requirements.

   b. All lots or units within the development shall have direct access to all conservation space as provided, by means of dedicated streets or walkways within the development or by the fact of physical contiguity to other public land or lands in common ownership of all residents. The developer shall not place age, race, creed, sex or economic restrictions (other than maintenance assessments) upon lot or unit owners for the use of said conservation space. Land which is restricted in any way so as to be for the use, benefit or enjoyment of a select group within the development shall not qualify as conservation space.

   c. The Homeowner's Association or the non-profit organization shall be established before any lots are sold.

   d. Membership shall be mandatory for each lot buyer, and any successive buyer.

   e. The association shall provide for liability insurance, any taxes and the maintenance of all grounds and facilities.

   f. Any sums levied by the association that remain unpaid shall become a lien upon the lot owner's property.

F. **Design Storm**

Stormwater runoff for the entire parcel will be managed by structures appropriately sized such that the peak rate of discharge from the site after completion of development for any storm up to and including the specified design storm, shall not exceed the peak rate of discharge from the site in its previous natural condition for the specified design storm. The design storm is specified as occurring once every ten years and lasting for 24 hours. Industrial, commercial, office or institutional development on a parcel one acre or less in size and with a maximum impervious to gross site area ratio of less than 0.2 shall be exempt from this control. Discharge of run-off from impervious surfaces for the entire parcel directly into natural water bodies
shall not be allowed. Runoff shall be routed along vegetated swales, through filter media of vegetation, gravel, sand, or other media, or to detention ponds for purposes of increasing percolation, settling and filtering out of non-point pollutants and decreasing discharge velocity.

G. **Buffer Strip**
Buffer strip, if required in accordance with Section 5.4, Landscaping and Buffering, shall not be extended through conservation space areas.

H. **Historical and Archaeological Sites**
1. If a developer wishes to develop an historical or archaeological site, the developer shall do one of the following:
   a. Provide for a thorough site investigation by a professional historian or archaeologist, as appropriate, who shall prepare a written report with the following information:
      1. Description of site;
      2. Relevant historical documentation/back-ground research;
      3. Research design;
      4. Field studies as actually implemented including any deviation from the design and the reason for the deviation;
      5. All field observations;
      6. Analyses and results;
      7. Information on the location of original data in the form of field notes, photographs, and other materials;
      8. Proof that adequate creation of artifacts and records to ensure their preservation and access for further study will be provided;
      9. Recommendation for further study and preservation of the site, given anticipated development; and
      10. Evaluation of the potential of the site for inclusion in the National Register of Historic Places. If the site is evaluated to have historical or archaeological significance and is eligible for the National Register, every reasonable effort shall be made in the development to preserve it.
   b. Give access rights for investigating the site and acquisition rights to artifacts to the Planning and Land Use Department or its designated agent for a period of at least 60 days between issuance of the building permit and any development of the property that would impact the site.
2. If a developer wishes to develop a site with an abandoned cemetery, or if an abandoned cemetery is discovered during the course of construction, the developer shall provide for the delineation of the abandoned cemetery by a qualified expert, subject to approval by the County.
5.7.4. ADDITIONAL PERFORMANCE CONTROLS

In addition to the general performance controls specified in Section 5.7.3, Conservation Space General Performance Controls, additional controls shall be required to protect certain conservation resources in certain zoning districts. Table 5.7.4: Additional Performance Controls, lists for each conservation resource and type of district (residential or non-residential and mixed use), the reference number of the group of additional controls that shall be required. Requirements for each group are set forth in subsections A through D, following the table. If the parcel being developed is associated with two or more conservation resources with conflicting performance controls, then the most restrictive controls shall apply. However, improvements as specified in Section 5.7.3.D, Improvements, may be permitted within the conservation space setbacks. Additionally, decks may be allowed to encroach into the conservation space setback up to six feet provided they are uncovered and constructed so that the floorboards are spaced to allow water to flow through directly to the ground. The ground below the deck shall be either left undisturbed or planted with ground cover or other vegetation.

A. Group 1 Performance Controls

1. Conservation Space Setbacks

   All structures and impervious surfaces shall be setback from the conservation space, if any, whether the space is located on the parcel or on an adjacent parcel, a distance of at least 100 feet.
2. **Retention of Runoff**

   In addition to designing the site to control stormwater from a ten-year storm, on-site retention or percolation areas shall be required for the entire parcel sufficient to control, at a minimum, the first one inch of runoff that will originate from all impervious surfaces anticipated to be on the site upon final development. The specified amount of runoff from impervious surfaces shall be disposed of by percolation into the soil, evaporation, transpiration, or other methods of treatment or handling acceptable to the County Engineering Department.

B. **Group 2 Performance Controls**

   1. **Conservation Space Setbacks**

      All structures and impervious surfaces shall be setback from the conservation space, if any, whether the space is located on the parcel or on an adjacent parcel, a distance of at least 75 feet.

   2. **Retention of Runoff**

      In addition to designing the site to control stormwater from a ten-year storm, on-site retention or percolation areas shall be required for the entire parcel sufficient to control, at a minimum, the first 0.75 inch of runoff that will originate from all impervious surfaces anticipated to be on the site upon final development. The specified amount of runoff from impervious surfaces shall be disposed of by percolation into the soil, evaporation, transpiration, or other methods of treatment or handling acceptable to the County Engineering Department.

C. **Group 3 Performance Controls**

   1. **Conservation Space Setbacks**

      All structures and impervious surfaces shall be setback from the conservation space, if any, whether the space is located on the parcel or on an adjacent parcel, a distance of at least 50 feet.

   2. **Retention of Runoff**

      In addition to designing the site to control stormwater from a ten-year storm, on-site retention or percolation areas shall be required for the entire parcel sufficient to control, at a minimum, the first 0.5 inch of runoff that will originate from all impervious surfaces anticipated to be on the site upon final development. The specified amount of runoff from impervious surfaces shall be disposed of by percolation into the soil, evaporation, transpiration, or other methods of treatment or handling acceptable to the County Engineering Department.

D. **Group 4 Performance Controls**

   1. **Conservation Space Setbacks**

      All structures and impervious surfaces shall be setback from the conservation space, if any, whether the space is located on the parcel or on an adjacent parcel, a distance of at least 25 feet.
2. Retention of Runoff

In addition to designing the site to control stormwater from a ten-year storm, on-site retention or percolation areas shall be required for the entire parcel sufficient to control, at a minimum, the first 0.25 inch of runoff that will originate from all impervious surfaces anticipated to be on the site upon final development. The specified amount of runoff from impervious surfaces shall be disposed of by percolation into the soil, evaporation, transpiration, or other methods of treatment or handling acceptable to the County Engineering Department.

5.7.5. VEGETATED BUFFER CONTROLS FOR CONSERVATION

A. Purpose and Intent

1. The establishment of a buffer zone is based upon the stated goals in Policies 3.10 and 3.11 of the 1999 Wilmington-New Hanover County Comprehensive Plan. The buffer zones are intended to promote the comprehensive plan goals of high water quality in the creeks and sounds, to protect the public health, and to ensure the protection of the natural resources of New Hanover County.

2. A properly vegetated buffer is essential to filter and biologically process nutrient rich runoff, animal wastes, and sediment before it enters coastal creeks, canals, and rivers. Buffers also function to moderate water temperatures, maintain the desired dissolved oxygen levels in the water, and stabilize the soils immediately adjoining the stream. In urban environments, the function of a buffer is especially critical to the balance of the plant and animal life in fresh and saltwater creeks. Buffers are most effective when they contain native and naturalized plants appropriate in size, adaptability (salt tolerance, wind tolerance, etc.) and hardiness for the area. Plants requiring intensive or routine maintenance should be avoided in buffer areas.

B. Applicability

The development and improvement of property, including the subdivision of land, shall be subject to the performance controls in this section (5.7.4) if any of the following conservation resources are associated with the parcel of record for which the development and improvement are proposed:

1. Salt marsh;
2. Brackish marsh;
3. Freshwater marsh; and
4. Primary nursery area.

C. Buffer Standards

1. Buffers shall extend 35 feet measured horizontally from the edge of the conservation resource and on a line perpendicular to and landward of the conversation resource.

2. The plant material in the buffer zone must be either retained in a natural, minimally disturbed condition, or properly managed in accordance with
the management standards presented in subsection 5 below. In cases where vegetation does not exist within the buffer, the County shall require restoration efforts which include, but are not limited to, replanting of the buffer zone with plant species as recommended in the "Reference Lists and Publications for Guidance in the Selection of Vegetated Buffer Plants".

3. Development activities within the buffer are limited to water dependent structures, except as otherwise provided in subsections 4 through 6 below, and Section 5.7.3.D, Improvements. Examples of water dependent structures include docks, piers, boat ramps, shoreline stabilization, navigation markers and access channels. In order to maintain the functional value of the buffer, excavation, grading, filing, or ditching is not permitted except as otherwise provided herein.

4. Passive public recreational facilities such as pervious trails and pathways, where owned by public entities or homeowners associations, may be permitted within the buffer.

5. In order to achieve the County goals to preserve, protect and restore water quality and natural resources, the buffer zone shall be vegetated and left in a natural, undisturbed condition, or managed in accordance with the intent of these goals. Management activities compatible with the intent of these goals include, but are not limited to the following:

   a. Shoreline Access Paths

      Pathways which provide access to the shoreline are permissible provided they are a maximum average of six feet in width and follow a path that minimizes erosion within the buffer zone. Pathways may be vegetated with grasses and mowed, or may be surfaces such as crushed stone, shell, or mulch. Elevated wooden walkways and stairs up to six feet in width may also be used, as long as there is spacing between boards and elevation of the walkway to provide for light penetration and rain water to drip through to allow for continued vegetation growth.

   b. View Corridor

      Selective tree removal, thinning, and pruning of natural vegetation within the buffer zone will be allowed to provide for site lines and vistas of the shoreline. Minimal alteration of the natural vegetation is preferred.

   c. Safety and Welfare

      Selective tree removal, thinning, and pruning of natural vegetation within the buffer zone will be allowed at the discretion of the landowner for safety and welfare concerns (e.g. removal of damaged tree in close proximity to a dwelling).

   d. Shoreline Erosion Control

      For necessary shoreline erosion control projects, trees and woody vegetation may be removed and the erosion control measure
employed in a manner which is consistent with the purpose and intent of this section. Areas cleared for erosion control measures may be required to be re-vegetated with plant species as recommended in the "Reference Lists and Publications for Guidance in the Selection of Vegetated Buffer Plants".

e. **Habitat and Species Management**

Management of natural vegetation within the buffer zone to enhance wildlife habitat, and control nuisance and non-native species may be allowed.

6. Buffers may be encroached by public roads, bridges, and utilities where no practical alternative exists to avoid encroachment. These structures should be designed consistent with the purpose and intent of this section.

**Section 5.8. Open Space Requirements**

5.8.1. **GENERAL**

All open space may be reserved and offered for dedication to the County for use as parks, recreation areas, school sites, or for other public purposes. Any space not offered for dedication to the County shall be shown and designated as private open space. Such open space shall remain undivided and no lot or unit owner or any other person shall bring any action for partition or division of any part except as provided in Chapter 47A (Unit Ownership Act) of the N.C.G.S. Each lot or unit owner’s undivided interest in the use of reasonably maintained open space shall be preserved through covenants running with the land. Title to such areas shall be encumbered for the perpetual benefit of the public generally or the private properties in the development, and all future use shall be consistent with the open space requirements. Improvements clearly incidental to the purpose of these provisions may be made within the open space.

5.8.2. **ACCESS TO OPEN SPACE**

All lots or units created within the development shall have direct access to all open space and recreational facilities, as provided, by means of dedicated streets or walkways within the development or by the fact of physical contiguity to other public lands in common ownership of all residents. The developer shall not place age, religious, sex, or economic restrictions (other than maintenance assessments) upon lot or unit owners for the use of the open space. Land which is restricted in any way for the use, benefit, or enjoyment of a select group within the development shall not qualify as open space.

5.8.3. **OPEN SPACE PROVISIONS**

The developer shall file a declaration of covenants and restrictions running with the land that will govern the open space. If the open space is to be retained by the developer, the developer shall be responsible for liability insurance, taxes, and the maintenance of all recreational facilities, and open space. This declaration shall be submitted prior to final plat approval. If a homeowners’ association or other such non-profit ownership is established, the declaration shall include but not be limited to the following:
A. The homeowners association or the non-profit organization shall be established before any lots are sold;

B. Membership shall be mandatory for each lot buyer, and successive buyer;

C. The association shall provide for liability insurance, any taxes, and the maintenance of all grounds and facilities;

D. Any sums levied by the association that remain unpaid shall become a lien upon the lot owner’s property.

Section 5.9. Fire Hydrants

The construction or expansion of any commercial, office, institutional, or industrial project resulting in at least 25,000 square feet of floor space shall include adequate fire protection through the provision of at least one fire hydrant, provided the project has a water system meeting state requirements (see Section 2101 Title 10 - Chapter 10D N.C.A.C.) for fire hydrants. These hydrants shall be connected with the water system serving the project and shall be constructed to specifications established by the County Fire Marshall based on NFPA standards.

Section 5.10. Airport Height Restriction

5.10.1. AUTHORITY

This section is adopted pursuant to the authority conferred by G.S. 63-30--63-37.

5.10.2. FINDINGS

A. It is hereby found that an obstruction has the potential for endangering the lives and property of users of the Wilmington International Airport, and property or occupants of land in its vicinity; that an obstruction may affect existing and future instrument approach minimums of the Wilmington International Airport; and that an obstruction may reduce the size of areas available for landing, takeoff, and maneuvering of aircraft, thus tending to destroy or impair the utility of the Wilmington International Airport and the public investment therein. Accordingly, it is declared:

1. That the creation or establishment of an obstruction has the potential of being a public nuisance and may injure the region served by the Wilmington International Airport;

2. That it is necessary in the interest of public health, public safety, and general welfare that the creation or establishment of obstructions that are a hazard to air navigation be prevented; and

3. That the prevention of these obstructions should be accomplished, to the extent legally possible, by the exercise of authority invested in the County.

B. It is further declared that the prevention of the creation or establishment of hazards to air navigation; the elimination, removal, alteration, or mitigation, of hazards to air navigation; or the marking and lighting of obstructions are public purposes for which a political subdivisions may raise and expend public funds and acquire land or interests in land.
5.10.3. JURISDICTION

Pursuant to G.S. 63-31(d), New Hanover County exercises its statutory authority as owner of the Wilmington International Airport, and in order to protect the approaches of said airport, the jurisdiction of this section is extended to all areas depicted on the Wilmington International Airport Height Restriction Map, including areas within the City of Wilmington, Pender County, and Brunswick County.

5.10.4. NONCONFORMING USES, STRUCTURES, AND TREES

A. The regulations prescribed by this section (5.10) shall not be construed to require the removal, lowering, or other changes or alteration of any structure or tree not conforming to the regulations on July 7, 2003, or otherwise interfere with the continuance of any nonconforming use. Nothing contained herein shall require any change in the construction, alteration, or intended use of any structure, the construction or alteration of which was begun prior to July 7, 2003, and is diligently prosecuted.

B. Notwithstanding the subsection A above, the owner of any existing nonconforming structure or tree is hereby required to permit the installation, operation, and maintenance thereon of such markers and lights as shall be deemed necessary by the airport authority to indicate to the operators of aircraft in the vicinity of the airport, the presence of such airport obstructions. Such markers and lights shall be installed, operated, and maintained at the expense of the Board of Commissioners of New Hanover County, State of North Carolina, or the Federal Aviation Administration.

C. Notwithstanding any preceding provision of this section, if, by a determination of the FAA, the encroachment of any tree into regulated airspace is such that providing markers and lights is insufficient to protect the life and property of the flying public, New Hanover County shall institute steps to have such trees cut and removed at the expense of New Hanover County if requested in writing by the Airport Authority. If unsuccessful in obtaining the cooperation of the parties involved, the Airport Authority shall petition the County to institute the appropriate legal action as reasonably necessary, to insure the safety of the flying public in airspace regulated by this Ordinance.

D. No permit shall be granted that would permit a nonconforming use, structure, or tree to become a greater hazard to air navigation than it was on the effective date of this ordinance or any amendments thereto or than it is when the application for a permit is made.

E. Whenever the New Hanover County Building Inspector determines that a nonconforming tree or structure has been abandoned or more than 80 percent damaged, physically deteriorated, or decayed, no permit shall be granted that would allow such structure or tree to exceed the applicable height limit or otherwise deviate from the zoning regulations.

5.10.5. VARIANCES

A. Applications for variances from the provisions of this section (5.10), shall be submitted and reviewed in accordance with Section 10.3.11, Variance – Zoning and Subdivision.
B. Any variance granted in accordance with subsection A above, may be so conditioned as to require the owner of the structure or tree in question to install, operate, and maintain, at the owner's expense, such markings and lights as may be deemed advisable to effectuate the purpose of this Ordinance and reasonable in the circumstances. If deemed proper by the Board of Adjustment, this condition may be modified to require the owner to permit the New Hanover County Airport Authority, at its own expense, to install, operate, and maintain the necessary markings and lights.

5.10.6. AIRPORT ZONES

In order to insure compliance with the provisions of this section, there are hereby created and established certain zones which include all of the land lying beneath the approach surfaces, transitional surfaces, horizontal surfaces, and conical surfaces as they apply to the Wilmington International Airport. Such zones are shown on the Wilmington International Airport Height Restriction Map consisting of one sheet, prepared by Talbert & Bright, Inc, and dated July 7, 2003. The map referred to in this section is on file in the office of the county clerk. An area located in more than one of the following zones is considered to be only in the zone with the more restrictive height limitation. The various zones are hereby established and defined as follows:

A. Precision Instrument Runway Approach Zone - The inner edge of this approach zone coincides with the width of the primary surface and is 1,000 feet wide. The approach zone expands outward uniformly to width of 16,000 feet at a horizontal distance of 50,000 feet from the primary surface. Its centerline is the continuation of the centerline of the runway.

B. Transitional Zones - The transitional zones are the areas beneath the transitional surfaces.

C. Horizontal Zone - The horizontal zone is established by swinging arcs of 10,000 feet radii from the center of each end of the primary surface of each runway and connecting the adjacent arcs by drawing lines tangent to those arcs. The horizontal zone does not include the approach and transitional zones.

D. Conical Zone - The conical zone is established as the area that commences at the periphery of the horizontal zone and extends outward therefrom a horizontal distance of 4,000 feet.

5.10.7. AIRPORT ZONE HEIGHT LIMITS

A. General

1. Except as otherwise provided in this section (5.10), no structure shall be erected, altered or maintained, and no tree shall be allowed to grow in any zone created by this Ordinance to a height in excess of the applicable height limit herein established for such zone. Such applicable height limitations are hereby established for each of the zones in question in accordance with subsections B through E below.

2. Except as defined in Section 5.10.8, Use Restrictions, nothing in this section (5.10) shall be construed as prohibiting the construction or maintenance of any structure, or growth of any tree, to a height of 50 feet above the surface of the land. Such potential obstructions are to be
resolved through the purchase of property in easement, or in fee simple. In addition to the height restrictions imposed by the imaginary surfaces, no structure or natural growth shall be erected, altered, allowed to grow, or be maintained within the areas defined in Section IV at such height as would result in the increase of any minimum flight altitude, vectoring altitude, ceiling, minimum descent altitude, or landing or take-off visibility minimum for any category of aircraft as established by the Federal Aviation Administration (FAA), unless approved by the New Hanover County Board of Commissioners or staff.

B. Precision Instrument Runway Approach Zone

Slopes 50 feet outward for each foot upward beginning at the end of and at the same elevation as the primary surface and extending to a horizontal distance of 10,000 feet along the extended runway centerline; thence slopes upward 40 feet horizontally for each foot vertically to an additional horizontal distance of 40,000 feet along the extended runway centerline. This applies to existing precision instrument Runway 35 and to existing Runways 6, 24, and 17 for a possible future precision instrument status.

<table>

</tbody>
</table>

C. Transitional Zones

Slope seven feet outward for each foot upward beginning at the sides of and at the same elevation as the primary surface and the approach surface, and extending to a height of 150 feet above the airport elevation which is 182 feet above mean sea level. Where the precision instrument runway approach zone projects beyond the conical zone, there are established height limits sloping seven feet outward for each foot upward beginning at the sides of and at the same elevation as the approach surface, and extending a horizontal distance of 5,000 feet measured at 90 degree angles to the extended runway centerline. In addition to the foregoing, there are established height limits sloping seven feet outward for each foot upward beginning at the sides of and at the same elevation as the approach surface, and extending to where they intersect the conical surface.

D. Horizontal Zone

Established at 150 feet above the airport elevation or at a height of 182 feet above mean sea level.
E. **Conical Zone**

Slopes 20 feet outward for each foot upward beginning at the periphery of the horizontal zone and at 150 feet above the airport elevation and extending to a height of 350 feet above the airport elevation.

5.10.8. **USE RESTRICTIONS**

Notwithstanding any other provisions of this section (5.10), no use may be made of land or water within any zone established by this section in such a manner as to:

A. Create electrical interference with navigational signals or radio communication between the airport and aircraft;

B. Make it difficult for flyers to distinguish between airport lights and others;

C. Result in glare in the eyes of pilots using the airport;

D. Impair visibility in the vicinity of the airport;

E. Create bird strike hazards; or

F. Otherwise in any way endanger or interfere with the landing, takeoff, or maneuvering of aircraft intending to use the airport.
